23.10.2025	187 900 km	**28 921 km**	6 mo.	
27.03.2026	214 257 km	**26 357 km**	5 mo.	

Important note on how service data is interpreted

Vehicle maintenance data in PROVIN databases is primarily collected from authorized dealer centers and select large-scale service networks.

Please note:

Limits of the records. Independent workshops do not submit data to international or dealer registry systems.

Missing services. If the report shows a longer interval in time or mileage between dealer visits than recommended by the manufacturer (or if entries are missing for certain periods), this does not prove that servicing was not performed.

Generic visits. For some manufacturers, an oil change is logged in the dealer records under the general heading 'maintenance', 'inspection', or 'service', without specifying the oil, filter, or viscosity. Such entries are not counted in the table as a confirmed oil change. This does not mean that the oil was not changed.

Conclusion. The absence of an entry in the report only indicates a lack of official records in that specific database, not an actual missed service.

Recommendation for a complete check.

To obtain an objective assessment of the vehicle's actual technical condition and service history, it is recommended to combine the digital report with:

- Entries in the physical service booklet and invoices/receipts from workshops.
- A pre-purchase inspection at an independent, trusted workshop.

Component Identification
Official dealer data confirms the vehicle's component configuration: it is a BMW 2 Series Gran Tourer (F46) equipped with a 2.0-liter diesel engine B47 C20 A (140 kW / 190 hp) and an automatic transmission with code GA8-G45AW. The paint code 300 (Alpinweiß III) is also recorded. This information allows for precise identification of the mechanical components.

Service and Repair History
A very detailed and regular service history in Germany from 2022 to 2026 is documented in the dealer system. In addition to regular oil and filter changes, other significant work is also recorded: At 77,924 km (04.03.2024), the front and rear brake discs and pads were replaced. At 158,985 km (11.04.2025), **the left rear light was replaced**. At 173,607 km (04.08.2025), rear brake maintenance was performed and **the EGR intake system was replaced**. At 200,000 km (19.01.2026), a **new genuine BMW battery** was installed.
These entries confirm systematic and timely maintenance carried out in accordance with manufacturer standards. The provision of a loaner vehicle is also regularly documented.

Mileage Consistency
The chronological mileage progression recorded in the dealer data is very consistent and shows no discrepancies. The last recorded reading in March 2026 is 214,259 km.

DISCLAIMER

PROVIN.LV provides an advisory service: an assessment of the available information about the vehicle, with recommendations. This is a digital compilation of data, not a technical diagnosis of the car, and it can in no way replace a thorough in-person check and inspection of the vehicle. The report is not an official extract from a state authority, an independent technical appraisal or a legal ruling. The final decision to purchase the vehicle rests with the client.

CONFIDENTIALITY

This report has been prepared exclusively for the customer who ordered it and is for personal use only. Copying, publicly reproducing, passing on or otherwise making this report or the information in it available to third parties (including the seller of the vehicle) without the prior consent of PROVIN.LV is strictly prohibited.
